Discount Eligibility (Arithmetic + Logical)

Scenario:

A shop gives:

- 10% discount if total > 100
- Extra 5% if customer is a member

Task:

Ask user:

- Total amount
- Is member? (True/False)

Rules:

- If total > 100 AND member → 15% discount
- If total > 100 only → 10%
- Otherwise → no discount

Smart Login System (Logical Operators Focus)

Scenario:

User can log in if:

- Username is "admin"
- Password is "1234"

Extension:

Add:

- Lock account after 3 failed attempts
- Use `!=`
- Use `or`

Number Analyzer (All Operators Combined)

Scenario:

User enters a number.

Program must:

1. Check if number is positive or negative
2. Check if even or odd
3. Check if number is between 10 and 50

Hints:

- Use `%` for even/odd
- Use `and`
- Use multiple `if` statements

Challenge Task

Build a “Student Progress Checker”

Ask for:

- Attendance %
- Assignment score
- Exam score

Rules:

- Must have attendance >= 75 AND exam >= 40 to pass
- Final mark = (assignment * 0.4) + (exam * 0.6)
- Distinction if final >= 70
- Merit if final >= 60
- Pass if >= 40
- Else Fail

Must use:

- Arithmetic
- Logical operators
- Comparative operators
- Nested if statements
